

**Spot On™ Deep Rose Stonecrop**  
*Sedum spurium 'Setz0001'*

Plant Height: 4 inches

Flower Height: 6 inches

Spread: 24 inches

Spacing: 18 inches

Sunlight: ☉ ●

Hardiness Zone: 4a

Other Names: Dragon's Blood Stonecrop, Two Row Stonecrop

**Description:**

This low, spreading, trailing variety is excellent for edging, rock gardens, or hot dry sites; shiny, sea green foliage takes on copper tones; vibrant deep rose pink blooms appear in early to late summer; very elegant along walkways or in containers

**Ornamental Features**

Spot On Deep Rose Stonecrop is smothered in stunning rose star-shaped flowers with hot pink overtones at the ends of the stems from late spring to late summer. Its attractive succulent oval leaves emerge light green in spring, turning bluish-green in color with distinctive plum purple edges and tinges of coppery-bronze. As an added bonus, the foliage turns a gorgeous burgundy in the fall. The dark red stems can be quite attractive.

**Landscape Attributes**

Spot On Deep Rose Stonecrop is a dense herbaceous evergreen perennial with a ground-hugging habit of growth. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Spot On Deep Rose Stonecrop is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover
- Container Planting
- Hanging Baskets

### Planting & Growing

Spot On Deep Rose Stonecrop will grow to be only 4 inches tall at maturity extending to 6 inches tall with the flowers, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. Like most succulents and cacti, this plant prefers to grow in poor soils and should therefore never be fertilized. It is not particular as to soil pH, but grows best in poor soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Spot On Deep Rose Stonecrop is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
